## FIJIAN IGUANA PROGRAM

Females

Males

**Fiji Bulabula Iguana**  
Banded Iguanas that occur on islands in the north, central and southern divisions of the Fiji Islands.

**Lau Banded Iguana**  
Banded Iguanas that occur in the Lau Group

**Fijian Crested Iguana**  
Islands on the western side of the Fiji Archipelago

The occurrence of the *Brachylophus* iguanas in the Fiji Islands has remained a mystery to today as their closest relatives live in the Americas depicting a journey of around 12,000km in pre-historic times. Three unique species survive in the Fiji Archipelago, however from recent studies, certain populations may have been isolated to extreme conditions creating rare and significantly new species. To date, conservation actions by the National Trust have focused on the Fijian Crested Iguana (*B. vitiensis*).
